

THE FUTURA SERIE

BACKSYSTEMS

Mobile ActiveFit shoulder straps
for an individual fit

Aircomfort Sensic
maximum multi-directional airflow

Perforated shoulder straps and hip fins
covered in mesh for superior ventilation

Newly configured lumbar pads
for wide load distribution
and good support

Hip pads
for compact load transfer
(Futura 22 SL & 24)

EVA foam shoulder straps and hip fins
for greater carry comfort

Effective load transfer
thanks to full-contact lumbar area

ECL (Ergonomic Comfort Lock)
anchors the hip fins to the top of the pelvis

Mobile Variflex hip fins
move with the body, ensure full mobility
and prevent the load from swaying to and
fro on uphill or downhill sections

Adjustable back length
guarantees an individual fit
(Aircomfort Sensic Vario only)

Aircomfort Sensic

- Maximum airflow due to
- Aircomfort suspended mesh back
 - perforated, mesh-covered shoulder straps
 - perforated hip pads
 - mesh in the lumbar region

- new, ergonomic lumbar pads
- load transfer via hip pads

Aircomfort Sensic

- Maximum airflow due to
- Aircomfort suspended mesh back
 - perforated, mesh-covered shoulder straps
 - perforated hip fins
 - mesh in the lumbar region

- new, ergonomic lumbar pads
- hip fins for improved load distribution

Aircomfort Sensic Pro

- back ventilation
- Aircomfort suspended mesh back
- 2-way airflow through back and shoulder areas

- up to 70% increased load transfer due to
- full-contact lumbar region
 - firmer hip fins
 - VariFlex
 - ECL

Aircomfort Sensic Vario

- back ventilation
- Aircomfort suspended mesh back
- 2-way airflow through back and shoulder areas

- superior load transfer due to
- adjustable back length
 - full-contact lumbar region
 - firmer hip fins
 - VariFlex
 - ECL

FEATURES

Futura Series

Front compartment
with integrated organiser

Wide aperture zip
main compartment opens out wide for better organisation

Mesh pocket on one hip fin
for important little items

Raised walking pole attachment
to prevent pole tips protruding and tipping the pack when placed on the ground

Pocket on both hip fins
for valuables and compact camera

Spindrift collar
is super quick to open

Partitioned body
main compartment sub-divided for better load distribution: with separate entry

2 bellows outer pockets
for neat packing

Partitioned body
main compartment sub-divided for better load distribution: with separate entry

Raised walking pole attachment
to prevent pole tips protruding and tipping the pack when placed on the ground

Pocket on both hip fins
for valuables and compact camera

Ice axe loop
separate from walking pole attachment

Volume expansion (+10 l)
via height-adjustable lid

Spindrift collar
is super quick to open

Additional front entry
for easy access and packing

SELLING POINTS

Aircomfort Sensic is the most ergonomically sophisticated and therefore most comfortable mesh back system on the market.

Deuter Aircomfort increases endurance! The person carrying the pack sweats up to 25% less (as tested and verified by the prestigious Hohenstein Institute in Germany). This is proven to lower the skin's surface temperature by up to 3° C and reduce strain on the circulation system.

1984: Deuter invents & patents the world's first mesh back system – that still counts as state-of-the-art today.

Even with a heavy load the **mesh remains taut and solid**. The body of the pack is not in contact with the back.

Plastic breaks, aluminium bends out of shape – but the **spring steel frame is flexible and indestructible**.

Hip pads are 3-dimensionally shaped to fit the pelvis – so no more uncomfortable edges digging in.

The S-shape of the straps follows the line of the shoulders, so they don't chafe against the neck or arms.

The Aircomfort mesh allows **technical clothing** to achieve its full potential.

Some 450,000 Aircomfort backpacks sold every year.

HOW TO PACK

A fit person should carry no more than 20-25% of his/her body-weight over longer periods of time. The closer the load sits to the body's centre of **gravity**  the easier it is to carry. How to pack a larger capacity pack (about 30 l):

- Small, frequently accessed items**
put in the lid pocket.
- Medium-weight gear**
such as clothing, should be packed towards the outside of the pack.
- Heavier equipment**
– tent, food, kit – above shoulder height and close to your back for maximum carry comfort.
- Lightweight gear**
such as sleeping bags or down clothing in the bottom compartment.

SL WOMEN'S FIT

Shorter back
Women usually have a shorter back than men. Our SL back systems are adapted to the female anatomy and are therefore shorter.

Slim-line shoulder straps
The SL shoulder straps are S-shaped, have rounded edges on all sides and the straps are also tapered towards the bottom. This creates a perfect fit over the shoulders — no pinching, no chafing. The shoulder straps are closer set to suit more slender female shoulders.

Ergonomic hip fins
With the waist belt closed the SL hip fins create a conical shape, with close set anchor points at a slight inward angle. Combined with the ergonomic shape of the SL hip fins, the result is a fit that moulds itself perfectly around the hips.
